XGT Diagnostics:
What we need to verify that XGT works is….

**PHA Spectrum for each XGT**
(like below)

By taking histogram, we can check

- Channel does work/not
- Threshold level
- PMT gain
XGT Diagnostics:
What we need to verify that XGT works is….

**Rate Counter for each XGT**
(like the right figure)

We also want to know **PHA/Low threshold voltage**
(House keeping?)
